Surely Health is the primary requisite of spiritual life.
YOGIC PERSPECTIVES ON DEPRESSION AND MENTAL HEALTH

BHAVANANI, YOGACHARYA ANANDA BALAYOGI *

ABSTRACT

I was dumbstruck when Sumathi walked into my office one day and said, "Doctor, Yoga is the best antidepressant ever created"! A truly wonderful and sincere statement 'from-the-heart' from a lady, who had suffered from depression for more than a decade and had been driven to despair by her condition. I still remember her coming to my office a few years ago with her husband and son who is a medical doctor. She was in terrible emotional and mental agony. Her husband a school headmaster had reached his limits too. She broke down numerous times during the hour long consultation and I cannot forget her prayer that, "All I want is, to be able to worship my God without pain and suffering". Her condition was so bad that she could not even motivate herself to do her daily Pūjā and had lost all interest in daily activities. And, here today, she was right in front of me making this lovely statement about the reality of Yoga being a boon for psycho-somatic health. She has become an advocate of Yoga for womanhood. So many others who found themselves in the same boat as her have today come out of their despair through her example of Yoga being the best antidepressant indeed

Key words : Yoga, depression, mental health, stitha prajña, mokṣa śāstra

Introduction

Yoga is a spiritual science for the integrated and holistic development of our physical, emotional, mental and moral-spiritual aspects of being. The philosophy of Yoga is practical and applicable in our day-to-day living. Yoga has been documented to normalise psycho-physiological function and recent advances in the field of research have shown that it has sound scientific basis.

Yoga is first and foremost a mokṣa śāstra meant to facilitate the individual to attain the final freedom, liberation or emancipation. One of the important by-products of the Yogic way of living is attainment of health and well being. This is brought about by right-use-ness of the body, emotions and mind with awareness and consciousness. This must be understood to be as healthy a dynamic state that may be attained in spite of the individual's sabīja karma that manifests as

* Programme Co-ordinator ACYTER, JIPMER, Pondicherry, India. Email: yognat@gmail.com Website: www.jipmer.edu/ACYTER/main.html
their genetic predispositions and the environment into which they are born. Yoga also helps maintain and sustain this dynamic positive state of health after it has been attained through disciplined self effort.

This qualitative aspect of health is something that Yoga and Indian systems of medicine have considered important for thousands of years. The definition of āsana given in the Yoga Sūtra as sthira sukham implies this state of steady well being at all levels of existence (sthira- sukham - āsanam- Yoga Darśana 2:46). Patañjali also tells us that through the practice of āsana we can attain a state that is beyond dualities leading to a calm and serene state of well being (tato dvandvānabhīghātaḥ- Yoga Darśana 2: 48).

Yoga understands health and well being as a dynamic continuum of human nature and not a mere 'state' to be attained and maintained. The lowest point on the continuum with the lowest speed of vibration is that of death whereas the highest point with the highest vibration is that of immortality. In between these two extremes lie the states of normal health and disease. For many, their state of health is defined as that 'state' in which they are able to function without hindrance whereas in reality, health is part of our evolutionary process towards Divinity. The lowest point on the dynamic health continuum with lowest speed of vibration may be equated with lowest forms of life and mineral matter while the highest point with highest speed of vibration may be equated with Divinity.

Qualities of Mental Health according to Yoga

Yoga not only considers physical health but also more importantly mental health. Qualities of a mentally healthy person (sthita prajña) are enumerated in the Bhagavad Gītā as follows:

- Beyond the animal tendencies of passion, fear and anger (vīta rāga bhaya krodhaḥ-BG 2.56)
- Devoid of possessiveness and egoism (nirmamo nirahaṅkarah- BG -2.7)
- Firm in understanding and un-bewildered (sthirabuddhir asammūḍhaḥ -BG - 5.20)
- Engaged in doing good for the benefit of all creatures (sarva bhūtaḥiterataḥ- BG 5.25)
- Friendly and compassionate to all beings (maitraḥ karuṇā eva ca- BG 12.13)
- Pure hearted and skilful without expectation (anapekṣaḥ śucir dakṣaḥ- BG 12.16)

The central theme of Yoga is the golden mean, finding the middle path, a constant search for moderation and a harmonious homoeostatic balance. Yoga is the "unitive impulse" of life, which always seeks to unite diverse streams into a single powerful force. Proper practice produces an inner balance of mind that remains stable and serene even in the midst of chaos. This ancient science shows its adherents a clear path to the "eye of the storm" and ensures a stability that endures within, even as the cyclone rages externally.
Maharshi Patañjali tells us that we can gain unexcelled happiness, mental comfort, joy and satisfaction by practicing contentment (santoṣāt anuttamaḥ sukhalābhaḥ- Yoga Darśana 2: 42). This link is quite apparent once we think about it, but not too many associate the need for contentment in their greed for anything and everything in this material world.

Causation of Psychosomatic Disorders:

Yogamaharshi Dr Swāmi Gītānanda Giri, founder of Ānanda Āśrama at Pondicherry has written extensively about the relationship between health and disease. He says, “Yoga views the vast proliferation of psychosomatic diseases as a natural outcome of stress and strain created by desire fostered by modern propaganda and abuse of the body condoned on all sides even by religion, science and philosophy. Add to this the synthetic “junk food” diet of modern society and you have the possibility of endless disorders developing...even the extinction of man by his own ignorance and misdeeds”.

He explains the root cause of disease as follows. “Yoga, a holistic, unified concept of oneness, is advaitam or non-dual in nature. It suggests happiness, harmony and ease. Dis-ease is created when duality or dvaitam arises in the human mind. This false concept of duality has produced all conflicts of human mind and the vast list of human disorders. Duality (dis-ease) is the primary cause of man’s downfall. Yoga helps return man to his pristine, whole nature.

All diseases, maladies, tensions, are manifestations of divisions of what should be man’s complete nature, the atman or ‘Self’. This ‘Self’ is “ease”. A loss of “ease” creates “dis-ease”. Duality is the first insanity, the first disease, the unreasonable thought that “I am different from the whole... I am unique. I am me.” The ego is a manifestation of disease. Only a distorted ego could feel alone, suffer from “the lonely disease”, in a Universe, a Cosmos totally filled with the ‘Self’.

Interestingly, he points out that one of the oldest words for man is “insāna”. Man is “insane”. A return to sanity, “going sane,” is the subject of real Yoga Śādhanā and Yoga Abhyāsa. Yoga Cikitsā is one of the methods to help insane man back onto the path of sanity. A healthy man or woman may be known by the term-Yogi”. A very strongly worded yet very true statement indeed from the Lion of Pondicherry!

Yogic Perspective of Depression

According to the Yoga Darśana codified by Maharshi Patañjali, depression or rather daurmanasya is one of the four vikṣepa sahabhuvaḥ that are the manifestations that accompany...
the obstacles to yoga sādhanā, the nava antarāya. The other sahabhuvaḥ are duḥkha or suffering, aṅgamejayatva or tremors and śvāsapraśvāsa or irregular respiration. (duhkhadaurmanasya - aṅgamejayatva -śvāsapraśvāsa vikṣepasahabhuvaḥ Yoga Darśana -1:31). When we analyze this sutra deeply we find that they are very true reflections of our inner state.

Duḥkha or painful suffering at the physical, emotional and mental level can drive us to despair. Suffering is an excellent trick our mind plays as very few can overcome the 'moment' of suffering. Very few are capable of realizing what is really happening in the process of their evolutionary journey. The moment 'suffering' is felt, most people give up, and the lower mind survives to fight another day.

Daurmanasya refers to dejection and despair. We must remember that depression is not just in the mind but has many physical aspects too. A state of depression is another tool by which the lower mind tries to halt the spiritual progress of a sādhaka. However we must realise that the greatest teachings are often given at moments of great despair. The art and science of Yoga understands that this may be the best 'teachable' moment and hence we find the highest teachings of the Bhagavad Gītā and Rāmāyaṇa coming at this point.

Our Guru Śvāmi Gītānanda Giri Guru Mahāraja used to say, "A nervous breakdown is actually an opportunity for a spiritual breakthrough if we can realise the positive implications in our moment of despair and dejection". The teachings of the Yoga Vāsiṣṭha and the Bhagavad Gītā which may be said to be the first and second recorded 'psychological counseling' sessions in human history were delivered when both Lord Rāma and Arjuna respectively were at the depths of their depression. If we realise that this is indeed a window of opportunity for growth, success will come to us the soonest. But if we miss this golden chance, then even the Divine will struggle to help us out of our own deep pit of self pity.

Aṅgamejayatva are the physical tremors of the body. The practice of āsana helps us to attain to a state of physical control over our body. This enables us to go beyond the dvandva, the pair of opposites that are the cause of these tremors. Tremors are an externalized manifestation of internal imbalances of our emotions and mind. Imbalance at the higher level causes the imbalance in the neuro-chemical transmitters and psycho-physiological pathways of the body, resulting in these physical tremors. When confronted with such a frightening manifestation, many aspirants get scared whether they are harming themselves and stop their Sādhanā out of fear.

Śvāsapraśvāsa refers to the irregularity in breathing patterns. One of the main physical manifestations of mental and emotional upsets is the haphazardness of respiration. Ancient Yogis
contemplated this deeply and found that mental disturbances cause irregularity and instability of respiration. Though their jñāna dṛṣṭi (perspective of wisdom) they realised that by stabilizing the breath, we can conversely produce a stability of emotions and mind. This knowledge is used even today in the practice of prāṇāyāma, when it is used as a means of altering the higher (mind) through the lower (body). This is one of the best examples of the numerous somato-psychic applications found in the practices of hātha yoga, the physical science of balancing equal and opposite energies.

Yogic Methods to Attain and Maintain Health

The science of Yoga has numerous practical techniques, as well as, advice for proper lifestyle in order to attain and maintain health and well being. Bahiraṅga practices such as yama, niyama, āsana and prāṇāyāma help produce physical health while antaraṅga practices of dhāraṇā and dhyāna work on producing mental health along with pratvāhāra. Yoga works towards restoration of normalcy in all systems of the human body with special emphasis on the psycho-neuro-immuno-endocrine axis.

In addition to its preventive and restorative capabilities, Yoga also aims at promoting positive health that will help us to tide over health challenges that occur during our lifetime. Just as we save money in a bank to tide over financial crises, so also we can build up our positive health balance to help us manage unforeseen health challenges with faster recovery and recuperation. This concept of positive health is one of Yoga’s unique contributions to modern healthcare as Yoga has both a preventive, as well as, promotive role in the healthcare of our masses. It is also inexpensive and can be used in tandem with other systems of medicine in an integrated manner to benefit patients.

Becoming one with the Breath:

In the science of Yoga, body movement and breath must be synchronized. The breath pattern is important. Particularly in the use of kriyā or structured movements like Sūrya namaskāra, the body is normally lifted on an incoming breath and lowered on an outgoing breath. Some of the breath patterns such as the bhastrīkā strengthen the whole solar plexus area, as well as, the diaphragm, building up stamina while producing internal cleansing of organs and the blood stream. Kapālabhāti is another dynamic technique that enables us to break out of the deep hole of depression by creating a sense of activation. Sūrya nāḍi and ujjāyi prāṇāyāma can also help in activating those who need the activation for healthy well being. The bandha trayam as well as
the aśvini mudrā are both a God-sent for those suffering from depression as they revitalise the entire psycho-neuro-endocrine system. The praṇava and bhrāmari prāṇāyāma work towards creating an inner harmony that results in the attainment of a state of mental calmness.

According to Dr. Swāmi Gītānanda Giri, one of the foremost exponents of Yoga in the 20th century, the inherent message of Prāṇāyāma can be summarised as follows:

- There is an absolute and direct correlation between the way an organism breathes and its energy level.
- There is an absolute and direct correlation between the way a man breathes and the length of his life span.
- There is an absolute and direct correlation between the way a man breathes and the state of mind and clarity of thought, which he enjoys.
- There is an absolute correlation between the way a man breathes and the quality of emotions, which he experiences.
- There is an absolute and direct correlation between the way a man breathes and the subtlety of the thoughts, which pass through his mind.

**Shifting from Individuality to Universality**

Yoga, which emphasizes the universal, is a perfect foil to those human activities, which glorify the personal. The ego which is fixated only on its own shallow self will soon run into the blank wall of depression and despair, overwhelmed by its own superficiality. That striving spirit which looks within at the universal aspect of its own nature and sees the oneness of the whole of creation will find an endless fountain of inspiration and joy. In short it may be safely said that the practice of Yoga as a unified whole helps the individual shift from an ‘I’-centric approach to a “we”-centric approach.

The Śrīmad Bhagavad Gītā says, "yogaḥ karmasu kauśalam" meaning thereby that Yoga is skill in action (BG 2:50). The real Yogi, immensely conscious and aware at the physical, mental and emotional levels gains great control through that consciousness over all aspects of life thus developing a real skill in living. Part of that skill springs from his cultivated detachment, his ability to work for “work’s sake,” and not for the sake of the reward. He realizes that his duty is to do his best but that the ultimate result is not in his hands. The Yogī performs the needed action not for the sake of the fruits of that action, but because it is good and necessary to do so. Such an attitude of mind produces consummate skill in whatever action the Yogī undertakes. Consummzate concentration, consummate controls are all offshoots of good Yoga Sādhanā. This
belies the age-old belief that the competitive spirit produces the highest skill. To this the Yogic answer is: detachment from the fruits of the action produces the greatest efficiency, for one is then above emotions connected with "goal-oriented", competitive thinking. The beauty of Yoga is that these abstract principles become concrete in the daily practice of the techniques available in the Yoga system. Once the "seed of Yoga" finds fertile soil, these concepts grow naturally, slowly but surely taking root in all aspects of life.

**Holistic Approach of Yoga**

The Yogic holistic approach to life that 'everything is important and everything has its effect' could do much to improve the mind, body and emotional states of well being. These practical approaches to health include:

- The use of early morning sunlight for healing and rejuvenative activities
- The use of water for internal and external cleansing
- Careful attention to diet of a sattvic nature
- Realising the necessity for balance between exertion and relaxation as all tension must be balanced using concept of *spanda niśpanda* or "exertion-relaxation-exertion-relaxation" in an alternating rhythm of activity,
- Learning how to "unwind" through the many relaxation techniques available in the Yoga science which can balance the immense amount of stress and strain that are part and parcel of day to day life
- Realising the need for clean air, water and food
- Becoming aware of the effect of modern modes of entertainment and addictive habits in general debilitation of the physical, emotional and mental nature
- Providing a "working philosophy" which will sustain one in triumph and defeat
- Learning to be sensitive to one's own bio-rhythms, one's own physical, mental and emotional cycles
- Being aware of the effects of the seasons and the various unnatural life styles to which the modern man is exposed

In short, all of these aspects of Yoga as a way of natural living can provide relief for many of the psychosomatic ailments affecting humankind today.
Cultivation of Positive Health

According to Yogacārīṇī Mīnākiṣṭi Devi Bhavanāni*, Yoga has a step-by-step method for producing and maintaining perfect health at all levels of existence. She explains that social behaviour is first optimized through an understanding and control of the lower animal nature (pañca yama) and development and enhancement of the higher humane nature (pañca niyama).

The body is then strengthened, disciplined, purified, sensitized, lightened, energized and made obedient to the higher will through āsana. Universal prāṇic energy that flows through body-mind-emotions-spirit continuum is intensified and controlled through prāṇāyāma using breath control as a method to attain controlled expansion of the vital cosmic energy. The externally oriented senses are explored, refined, sharpened and made acute, until finally the individuals can detach themselves from sensory impressions at will through pratyāhāra.

The restless mind is then purified, cleansed, focused and strengthened through concentration (dhyāna). If these six steps are thoroughly understood and practiced then the seventh, dhyāna or meditation (a state of union of the mind with the object of contemplation) is possible. Intense meditation produces samādhi, or the enstatic feeling of Union, Oneness with the Universe. This is the perfect state of integration or harmonious health.

Yogic Tools for Positive Mental Health

In order to create an environment conducive to the development of positive mental health as also to prevent and manage the psychosomatic lifestyle disorders that are threatening humankind, Yoga offers us many practical 'day-to-day' methods of action. Some of these tools for positive health are as follows.

1. Become aware of your body, emotions and mind: Without awareness there cannot be health or healing. Awareness of body implies conscious body work that needs to be synchronized with breath to qualify as a psychosomatic technique of health and healing. Psychosomatic disorders cannot be tackled without awareness.

2. Improve your dietary habits: Most disorders are directly or indirectly linked to improper dietary patterns that need to be addressed in order to find a permanent solution to health challenges. One of the most important lifestyle changes that needs be implemented in management of any lifestyle disorder is diet.

* Director ICYER at Ānanda Āśrama in Pondicherry
3. Relax your whole body: Relaxation is most often all that most patients need in order to improve their physical condition. Stress is the major culprit and may be the causative, aggravating, or precipitating factor in so many psychosomatic disorders. Doctors are often found telling their patients to relax, but never tell them how to do it! The relaxation part of every Yoga session is most important for it is during it that benefit of practices done in the session seep into each and every cell producing rest, rejuvenation, reinvigoration and reintegration.

4. Slow down your breath making it quiet and deep: Rapid, uncontrolled, irregular breathing is a sign of ill health whereas slow, deep and regular controlled breathing is a sign of health. Breath is the link between body and mind and is the agent of physical, physiological and mental unification. When breath is slowed down, metabolic processes are also slowed and anabolic activities begin the process of healing and rebuilding. If breath is calm, mind is calm and life is long!

5. Calm down your mind and focus it inwardly: The mind is as disturbed as a drunken monkey bitten by a scorpion say our scriptures. To bring that wayward agitated mind under control, and take it on a journey into our inner being is fundamental in finding a way out of the 'disease maze' in which we are entangled like a fly in the spider’s web. Breath work and sensory control are the base on which mind training can occur; hence much importance is given to prāṇāyāma and pratyāhāra. It is only after this that concentration practices leading to meditation can have any use. Just sitting and thinking about something is not meditation!

6. Improve the flow of healing 'Prāṇic Life Energy': Improve the flow of healing 'Prāṇic Life Energy' to all parts of the body, especially to those diseased parts, thus relaxing, regenerating and reinvigorating ourselves. Prāṇa is life and without it there cannot be healing. The different prāṇa and upa prāṇa vāyu that are energies driving different physiological functions of the body need to be understood and applied as per needs of the patient.

7. Fortify yourself against omnipresent stressors: Decrease your stress level by fortifying yourself against the various omnipresent stressors in your life. When face to face with the innumerable thorns in a forest, one may either choose to spend all their time picking them up one by one while other thorns continue falling or choose to wear a pair of shoes and walk through the forest. The difference is in attitude. Choosing the right attitude can change everything and bring about a resolution of the problem by healing the core. Stress is more about how you react to the stressor than about the nature of the stressor itself!
8. Increase your self reliance and self confidence: Life is full of challenges that are there only to make us stronger and better. The challenges should be understood as opportunities for change and faced with confidence. We must understand we have the inner power to overcome each and every challenge that is thrown at us by life. The Divine is not a sadist to give us challenges that are beyond our capacity!

9. Facilitate natural emanation of wastes: Facilitate natural emanation of waste from the body by practicing śuddhi kriyās like dhauti, basti and neti. Accumulation and stagnation of waste materials either in inner or outer environment always causes problems. Yogic cleaning practices help wash out impurities (mala śodhana) thus helping the process of regeneration and facilitating healing.

10. Take responsibility for your own health: Remember that ultimately it is “YOU” who are responsible for your own health and well being and must take the initiative to develop positive health to tide you over challenging times of ill health. Yoga fixes responsibility for our health squarely upon our own shoulders. If we do healthy things we are healthy and if we do unhealthy things we become sick. No use complaining that we are not well when we have been the cause of our problem. As Swāmiji Gītānanda Giri would say, “You don’t have problems-you are the problem!”

11. Health and happiness are your birthright: Health and happiness are your birthright, claim them and develop them to your maximum potential. This message of Swāmiji is a firm reminder that the goal of human existence is not health and happiness but is mokṣa (liberation). Most people today are so busy trying to find health and happiness that they forget why they are here in the first place. Yoga helps us regain our birthright and attain the goal of human life.

Conclusion

The dedicated practice of Yoga as a way of life is no doubt a panacea for problems related to psychosomatic, stress related physical, emotional and mental disorders and helps us regain our birthright of health and happiness. It is only when we are healthy and happy that we can fulfil our destiny.

There are so many like Sumathi who have benefited by the life enhancing qualities of Yoga as a way of life. Many of them were in the depths of despair and on the verge of committing suicide before they came to Yoga. Today after many years of sādhanā coupled with the adoption
of the *Yoga Bhāvanā* (Yogic attitudes) they have not only climbed out of the 'deep self-made well' of depression but are guiding others too. Some of them have become beacon lights to hundreds of their fellow human beings and are enabling them to come out of their shells and shine bright as stars. A lighted lamp gives off more light when it 'shares' itself by giving to other lamps thus enlightening the universe. So also, these harmonious human beings are spreading the 'Joy of Yoga’ all over the world and in doing so fulfilling their destiny.
